DIRECTIONS FOR USE

1. Mix well prior to use.
2. Fill mix tank one-half to two-thirds full with water. Start and maintain constant agitation throughout entire mixing and treating process.
3. Add seed treatment materials in the following order:
 - A. Wettable powders
 - B. Dry Flowables
 - C. Liquid Flowables
 - D. Color Coat Liquid Colorant
 - E. Emulsifiable Concentrates
 - F. Soluble powders or liquids
 - G. Add recommended amount of CF Neutral
4. Bring the volume of slurry treatment mixture to the desired volume, with water.
5. To maintain a trouble-free application system, it is recommended that you back-flush your treating system at the end of each work day.

A jar test of all components in the slurry is strongly recommended to ensure compatibility and the correct order of product addition into the slurry prior to committing to a large mix batch. Always allow enough time between the addition of each component of a slurry mixture to ensure adequate suspension of the component prior to adding the next component.
