#### DIRECTIONS FOR USE

1. Agitate or mix well before using.
2. Fill mix tank one-half to two-thirds full with water. Start and maintain constant agitation throughout entire mixing and treating process.
3. Add seed treatment materials in the following order:
  - A. Wettable powders
  - B. Dry Flowables
  - C. Liquid Flowables
  - D. Color Coat Liquid Colorant
  - E. Emulsifiable Concentrates
  - F. Soluble powders or liquids
  - G. Add recommended amount of CF Clear
4. Bring the volume of slurry treatment mixture to the desired volume, with water.
5. To maintain a trouble free application system, it is recommended that you back-flush your treating system at the end of each work day.

A jar test of all components in the slurry is strongly recommended to ensure compatibility and the correct order of product addition into the slurry prior to committing to a large mix batch. Always allow enough time between the addition of each component of a slurry mixture to ensure adequate suspension of the component prior to adding the next component.
