DIRECTIONS FOR USE
SLURRY INOCULATION

1. Prepare a slurry by mixing the entire contents of this pack into one litre of cool, clean water.
2. Stir to ensure inoculant is thoroughly dispersed. Wait for a minimum of 15 minutes, stirring occasionally to allow inoculant adhesive to dissolve.
3. Pour slurry over the correct weight of seed and mix until all seeds are wet. Mixing can be done in a clean concrete mixer, or similar vessel, or added to seed during transfer stages, e.g. augering seed.
4. Use the slurry mix within 24 hours. Sow inoculated seed as soon as possible or store for up to 3 days in a COOL place, away from sunlight.

PRECAUTIONS

Store this pack of inoculant in a COOL place. Do not store opened packs of inoculant. Do not use out-of-date inoculants.

PESTICIDES

Most pesticides are toxic to inoculants. Do not use any vessel which has contained poisonous sprays or dusts. Check with your local department of agriculture/primary industry or Becker Underwood for compatibility.

FERTILISERS

Slurry inoculated seed should never be mixed with very acid or alkaline fertiliser which will KILL the inoculant bacteria. Excessive use of starter nitrogen fertiliser, or high levels of soil nitrate can delay or reduce nodulation.

WARRANTY

The product must be used strictly in accordance with the label directions and instructions. Becker Underwood accepts no liability or responsibility for any consequential loss or otherwise arising from failure to follow these directions and instructions. The liability of Becker Underwood is limited to that imposed by statutes and, in any case, the liability is strictly limited to replacement of the product or (at the option of Becker Underwood) the refund of the price paid.
