

Rhizo-Stick®

Self-Sticking, Peat-Based Inoculant for Dry Beans/Snap Beans

(also treats Black Beans, Cranberry Beans, Field Beans, Garden Beans, Great Northern Beans, Kidney Beans, Navy Beans, Pink Beans, Scarlet Runner Beans, Snap Beans, String Beans, Wax Beans)

Benefits

- Exceptional Adherence
- Yield Booster
- Easy to Apply

Guarantee

This product delivers 3x10⁸ viable cells of *Rhizobium leguminosarum* bv. *phaseoli* per gram with a one year product shelf life.

Product Information

Rhizo-Stick® is a peat-based inoculant containing concentrated numbers of rhizobia with a special built-in sticking agent. Rhizo-Stick's higher adhesion results in higher nodulation and higher yields.

Directions for Use

2.7 oz. Rhizo-Stick treats approximately 50 lbs. of seed (5 lb pack treats 1,500 of seed). Using excess amounts of Rhizo-Stick can cause seed flowability problems. Rhizo-Stick works well when the product is layered into the planter box with the seed and mixed well. Placing the product on the outside edges of the planter-box provides better application compared to placing the inoculant in the center of the planter-box.

For best results, seed should be planted within 24 hours of inoculation.

Seed Treatment Compatibility

Some seed treatments are harmful to inoculants. Contact your dealer/manufacturer or visit web site at www.beckerunderwood.com/inoculants for details. Please observe planting window recommendations for optimal responses.

Precautions

Inoculants are live organisms. Store between 40°-77°F (4°-25°C), away from direct sunlight. For more uniform temperature control, store at floor level. Ensure that inoculant is stored correctly in the field prior to use. Once opened, use within 24 hours. Do not use inoculant that is past its expiration date or that has not been correctly stored. Unless otherwise directed, do not mix inoculant with fertilizers or pesticides. If soils are especially dry at planting, any risk of damage to the inoculant can be minimized through light irrigation, if available. Under adverse or stress planting conditions (hot, dry field conditions), it is suggested to increase the inoculant application rate.

Rhizo-Stick® is a registered trademark of Becker Underwood Inc.
