

# Equate™

## Polymer Seed Conditioner Film

### Benefits

- Easy Clean-Up
- Low Viscosity
- Wettable Powder

### Product Information

Equate™ is an effective polymer binder that controls dust off during treatment, processing, planting, and rebagging. Equate also can be used to increase seed size or make shape more uniform for planting. Another advantage of this product is it's ability to hold the colorants, such as Color Coat, and seed treatments securely to the seed.

### Directions for Use

1. Agitate.
2. Fill mix tank one-half to two-thirds full with water. Start and maintain constant agitation throughout entire mixing and treating process.
3. Add seed treatment materials in the following order:
  - a. Wettable powders
  - b. Add recommended amount of Equate.
  - c. Dry flowables
  - d. Liquid flowables
  - e. Color Coat liquid colorant
  - f. Emulsifiable concentrates
  - g. Soluble powders or liquids
4. Bring the volume of slurry treatment mixture to the desired volume with water.
5. To maintain a trouble-free application system, it is recommended to back flush treating systems at the end of each work day.

A jar test of all components in the slurry is strongly recommended to ensure compatibility and the correct order of product addition to the slurry prior to committing to a large mix batch. Always allow enough time between the addition of each component of a slurry mixture to ensure adequate suspension of the component prior to adding the next component.

### Usage Chart

Contact manufacturer for specific rates for your application.
