

# SECURE™

## Polymer Seed Conditioner Film

### Benefits

- Non-Acidic
- Low Viscosity
- Easy Clean-Up
- Neutral pH
- Water Based
- Excellent Seed Safety

### Product Information

Secure™ polymer is utilized on a variety of seeds including canola, cotton and vegetables with most active ingredient packages to control dust from seed and seed treatments in commercial seed processing facilities.

### Directions for Use

1. Agitate.
2. Fill mix tank one-half to two-thirds full with water. Start and maintain constant agitation throughout entire mixing and treating process.
3. Add seed treatment materials in the following order:
  - a. Color Coat™ Red WSP® or wettable powders
  - b. Dry flowables
  - c. Liquid flowables
  - d. Color Coat liquid colorant
  - e. Emulsifiable concentrates
  - f. Soluble powders or liquids
  - g. Add recommended amount of Secure polymer
4. Bring the volume of slurry treatment mixture to the desired volume with water.
5. To maintain a trouble-free application system, it is recommended to back flush treating systems at the end of each work day.

A jar test of all components in the slurry is strongly recommended to ensure compatibility and the correct order or product addition to the slurry prior to committing to a large mix batch. Always allow enough time between the addition of each component of a slurry mixture to ensure adequate suspension of the component prior to adding the next component.

### Usage Rate

#### CROP

#### SECURE RATE/100 LBS OF SEED

COTTON	1.00 – 1.50 fl. oz.
CANOLA (treated)	0.50 – 1.00 fl. oz.
CANOLA (5% weight gain)	2.00 fl. oz.**

\*Suggested rates: Some variations may occur. Adjust the rates to obtain the desired coverage due to the seed size, seed coat, conditioning equipment and total slurry.

\*\*Rates may also vary depending on weight gain. Contact Becker Underwood for recommended rates and other crops.
